

Week 7

Nucleophilic Aromatic Substitution

7.1 Office Hours (Salinas)

- 2/21:
- Setup drawings points for Eucalyptus Oil and Bromination of Vanillin notebook pages? No new glassware setups so no drawings needed, right?
 - Nope, not needed — we can just refer back.
 - Go over Eucalyptus Oil reagent table column entries; make sure I have everything I need.
 - Any hydrocarbon component.
 - Crude yield and percent recovery calculations?
 - I did them correctly.
 - Do we not need an entry for one of the substances this week? Perhaps EtOH in H₂O? Since there are only 15 points on Canvas, that leads me to think you're only looking for 5 entries.
 - Do all six reagents.
 - Just treat 50% EtOH in H₂O as EtOH (though there might be slight safety differences; check to make sure there isn't a separate MSDS for EtOH in H₂O).
